FOR IMMEDIATE RELEASE

Dr. Michael Frith joins BioRESEARCH Assoc. with New Dental Laser Technology “The Next Big Thing in Pain Management”

Dr. Michael Frith has been asked to join the Dentist Development and Education Team of BioRESEARCH Assoc. Inc. of Milwaukee WI. BioRESEARCH is the world leader in craniofacial diagnostic aids and with Dr. Frith's help they are working to develop and train dentists in objective, biometric diagnostics of craniofacial pain together with the treatment option of using the MLS Mphi5 Laser technology. Together they hope to educate dentists and patients on the importance of objective diagnosing in the dental field and giving patients the best available technologies and treatment options.

The Mphi Family Diode laser (ASA Laser, Italy) is fast, effective and produces some of the best results ever seen. The laser works by reducing inflammation, reducing pain, and promoting the body's ability to heal itself. With fast treatment times and reduced number of treatments, the MLS laser gives clinicians another option for speeding up treatment times in dental applications. Please contact Dr. Frith or BioRESEARCH for more specific information.

As a non-invasive treatment option for TMJ and Facial Pain, the MLS laser now offers patients a higher level of care and management of facial pain and inflammation.

Dr. Frith's role on the team is to use the MLS laser technology along with advanced diagnostic aides for TMJ dysfunction and craniofacial pain in the clinical setting. Dr. Frith will also help to develop and educate practicing dentists in North America with his advanced dentistry techniques.

With the rising cost of health care, Dr. Frith knows it is critical to offer affordable and objective tests to any patient that is experiencing pain, dental breakdown or splint therapy.

If you would like more information about this topic, or to schedule an interview or dental consultation with Dr. Michael Frith call 636-394-5200.
